TO WHOMSOEVER IT MAY CONCERN

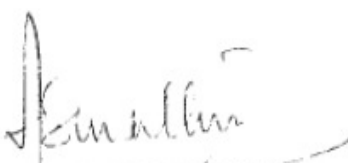

Sub: Bi Fuelling System from Onsite Power Solutions Ltd.

This is to certify that as part of our endeavour to make our captive power generation cost effective, we have installed Bi fuelling kit during June 2005 on our two existing 1000 KVA DG sets coupled with Commins engines.

With the kind of load requirements for our chemical processes, we are using these DG sets continuously as the main source.

We find the safety controls incorporated with the system enable the engines to operate safely. The performance of the kit generates a fair amount of saving by replacing the diesel fuel by natural gas. Apart from this, the hazardous emissions are reduced to negligible levels on Bi Fuel (Natural gas + Diesel) mode.

We would like to place on records our satisfaction over the efforts by Onsite Power Solutions in ensuring a safe installation and providing adequate training to our staff.

(DR. A.K. MATHUR)
